After a discussion with her family doctor, Liz is prescribed medication and receives a referral to a specialist.

Liz is at home experiencing minimal improvement and feeling doubtful, waiting for her appointment.

After a six-month wait to see a psychiatrist, her medication is adjusted and she begins to feel hopeful.

After a few months on medication, Liz isn't feeling better and is experiencing new side effects.

Result: Liz is left feeling helpless, scared and not ready to return to work.
